(a) Relaxation time: two separate trends
WS
RGG
Steps to reach 90% on the best option
Graph relaxation time $\tau = 1/(1-\lambda_2)$
(b) Path length predicts both families
$t_{90} = 46.0 + 3.26 \cdot L$
$R^2 = 0.93$
WS
RGG
Steps to reach 90% on the best option
Average shortest-path length L
